Automatic Offsite File Backup Service

What is it?

KDI's automatic offsite file backup service consists of ultra-reliable QNAP Network Attached Storage hardware plus our proprietary automatic backup script. This connects your network with our secure servers.

What does it do?

This service ensures your computerized data is automatically and safely backed up nightly, and available in case you accidentally delete a file or a disaster occurs. The first time it runs, the service backs up everything. Your files are saved to the QNAP hardware and across the Internet to our secure, offsite servers. Every following night, only files you have changed are backed up. This is called Incremental Backup and it saves you a great deal of money because you only pay for the traffic you really need. When you have an "Oops!" or a major disaster, all you have to do is simply download your files and you're back in business.

What are its highlights?

KDI's automatic offsite data backup service gives organizations:

- The **peace of mind** of hassle-free offsite data storage
- **Risk-Free** 90 day trial period
- Two mirrored 500GB or 1TB drives
- Updated software to make it NAS with remote backup capability
- 50GB storage plus 2GB per month of traffic offsite storage provided
- **Very affordable** $95 setup (includes configuration, shipping & handling) plus $85 per month account fees!
