

'Small Form Factor' NetSentron

What is it?

The Small Form Factor NetSentron is a network security appliance made especially for operations with a total of 50 or fewer people using the Internet at the same time. The **NetSentron** is a:

- **Firewall,**
 - **Virtual Private Network (VPN) / secure remote access device**
 - **True Internet content filter**
- all in one small hardware package.

What does it do?

The Small Form Factor NetSentron **protects the organization's network, data and staff from the dangers of the Internet.** Files are kept safe from hackers, data is encrypted to a level approved of for transporting 'US Top Secret'-rated files across the Web, and users are able to securely log in to the company's network from anywhere they have an Internet connection. Internet users are stopped from viewing inappropriate websites as defined by the owner: these could include porn, hate, gambling or music download sites.

"Investing in NetSentron not only provided our offices...with very secure over-the-Internet network connections: it also paid for itself and saved me over \$70,000 in 'hard costs', and much more in 'soft costs', over five years."

Linda Simpson
President - Western Concord

What are its highlights?

The Small Form Factor NetSentron gives small to medium-sized organizations:
