

ALL-IN-ONE!

Are you tired of searching for a Firewall only to find out that it does not have an Intrusion Detection System? Or how about installing a Content Filter system only to find out a week later that it is obsolete? All that money and time wasted. Now just imagine having a Firewall with Intrusion Detection, 'True' Content Filtering and SPAM Filtering all in one. With the **netsentron** you get all that and more in one nice affordable package.

In 2003 CMP Network Magazine nominated netsentron for the Best Intrusion Detection System

netsentron  is a registered trademark of Kobelt Development Inc.

Protect Your Company From Internet Security Threats

Keep Your Business Information SECURE!

Every day more and more companies are doing their business online, unfortunately they are also leaving their company's network open to intruders and with the ever changing Internet, it is more important now than ever to have security protocols in place. The **netsentron** security server is designed to protect your company's network from external attacks while still allowing your staff access to the resources of the Internet. With an easy to use Intrusion Detection and reporting system you can see where and when someone has tried to hack into your company's network. The **netsentron** also allows the ability to detect, prevent and monitor internal intrusions.

Surf the Internet SAFELY

Unlike traditional web filters that come with a large list of bad sites (which need to be updated frequently), the **netsentron** is equipped with **true** content filtering. This type of content filtering checks every page that your staff may access for 'bad' content and bans the page if it is deemed unsuitable. With the Internet changing every single day, web address filtering can be extremely difficult as sites change and new ones come up all the time. Also, most companies don't have the resources to monitor, let alone the ability to stop employees from accessing certain sites during work hours. By employing the **netsentron** you can keep your business and employees safe from offensive and even illegal material on the Internet.

- Ban or Block Internet access by IP Address
- Ban Partial or Whole Web Site access (by URL or Domain Name)
- Log all sites that were accessed and all sites that were denied. Ban or Block Internet Access by username
- Log by Username
- Log By IP Address
- Create Groups (e.g. Managers and Employees)

SECURE Remote Access

No more late nights in the office! With the **netsentron** you can provide your staff with the ability to securely access their work from the comfort of their own homes. The **netsentron** allows for virtually unlimited VPN connections for permitting secure access from remote locations or for linking one or more locations together. Salespeople can access customer information and quotations securely from virtually anywhere.

Is Your Business Safe from Internet Threats?

Hack attacks, and Spyware can be devastating to any business. KEEP your network safe using netsentron

REDUCE The Amount of SPAM you receive

The **netsentron** helps to reduce the large amount of SPAM you receive on a daily basis. And as most of us are aware that amount keeps getting larger each day. Based on blacklists, SPAM content and pattern email headers are tagged for selected action based on the recipient. Just imagine how more productive your staff could be by not having to sort through hundreds of junk-emails. Both time saving and cost effective.

DECREASE Popup Ads

Are you tired of those irritating advertisements that pop up on the screen when you are surfing the net? With the **netsentron** you can take back control of your web browsing by reducing the amount of popups that appear. Now you can spend less time shutting down those annoying ads and more time searching the Internet for what you really need.
